

Bulk Corporate Payments

aplONBulk is the simplest and fastest way to implementing bulk corporate payments within a bank environment. It provides an innovative SOA (service oriented architecture) approach that is easy to deploy and requires a minimum amount of customization.

aplONBULK provides banks with a competitive advantage by enabling the provision of more innovative products to their corporate clients and thereby improving their value proposition.

aplONBULK is a platform independent plug-in that can be integrated in a matter of days with a banks existing payments system to provide the additional functionality required.

Acting as an interface to the banks payments system, aplONBULK enables existing systems to be enhanced to support bulk corporate payments.

Payments are communicated from the Corporates using either ISO 20022 format payment initiation (pain) messages or the bank's proprietary format.

The status of each payment is continuously updated during the payment process and reported to the corporate to facilitate the updating of their internal systems.

Immediate benefits include:

- Streamlining of corporate accounts payable process
- Secure and fast receipt of multiple payment instructions
- Better control of the payments process compared to the traditional, time intensive instructing and processing of individual transactions
- Feedback of a payments status automatically reported to the corporate
- Automatic warehousing of future payments
- Supports industry standard ISO 20022 format payment initiation messages for increased flexibility and global compatibility
- Works in conjunction with aplONCASH to provide seamless connectivity between corporate and bank

The aplON product family:

aplONBULK

Extend your payments system with corporate payments

aplONCASH

Corporate payments and cash reporting

for sepa
aplONHUB

Centralize your SEPA payments
