

SEPA Bank Payments Hub

The payments landscape is undergoing dramatic change and many banks have been forced to implement short-term measures to support the latest initiatives.

Wary of investing huge sums in new payments platforms and dealing with the disruption such a fundamental overhaul can cause, many have instead turned to bureaux services and the outsourcing of new payment formats such as SEPA.

Together the adoption of SEPA and SWIFT MX (ISO 20022 based) standards means this is a global issue affecting all banks.

With this in mind, Datamation have developed aplonHUB to provide banks with a simplified solution to the process of regenerating their payments systems.

aplONHUB is a platform independent plug-in that can be integrated in a matter of days with a banks existing payments system to provide the additional functionality required.

Some of the many key features:-

Multi-bank support provides expanding banking groups with the ability to consolidate the group's incoming and outgoing payments through a single connection.

Multi-format support provides for incoming and outgoing credit transfers using SEPA and SWIFT MX.

Multi-ACH support enables multi-region banking groups to support a different ACH per bank, either a local ACH such as SIBS or to consolidate their payments through a pan European ACH such as the EBA or Deutsche Bank.

AML functionality is provided through full integration with leading AML packages such as Safewatch.

Scheduling Tool provides independent rules for each bank and ensures that any time zone differences and specific ACH rules are easily catered for.

Acting as an interface to the banks payments system, aplonHUB enables any legacy system to be enhanced to enable full XML ISO20022 support for both incoming and outgoing messages.

aplONHUB provides the most cost effective solution to the task of future proofing your payments system while at the same time safeguarding your initial investment.

The aplon product family:

aplONBULK
Extend your payments system
with corporate payments

for sepa
aplONHUB
Centralize your SEPA payments
